

Known issues:

(Majority of issues are lower-end machine related)

Sega Model 3 is on regular launchbox, not Bigbox. When exiting from game, Bigbox freezes

.....

Sega mastersystem game: Gangster town, accuracy is trash during name input, but fine after that (This game is playable with 2 guns)

.....

For lower end systems: Optiplex running i7 4th gens running just on base graphics. Sega Naomi and Atomiswave games run slow. Playable but slow.

Also, in mame Golgo13 takes a min to load, perfectly playable after that

.....

Action Max games may Flicker, it's either

result of your monitor or if you're running on a lower end setup

.....

Sega model 2 games may not come up full screen but will be in 4:3 ratio if not full screen. This changes monitor to monitor

.....

Make sure your video and other drivers are upto date if you experience issues, it's just good practice anyways

.....

Intro video may come up and may not sometimes. Just a launchbox issue. If a few secs go by and no video shows, just hit your dpad or other keyboard buttons to start the bigbox UI

.....
